UAMschool4cities

UAMschool4cities Project aims to equip local authority employees with skills for managing Urban Air Mobility (UAM) services.

Successful Completion of UAM Training Program, Project Result 3

In a significant milestone, PR3 has successfully fulfilled its objective by creating an all-encompassing training initiative centered on occupational profiles and system requisites for applications in Urban Air Mobility (UAM). The program, consisting of modules spanning 6-8 hours, comprehensively covered critical facets such as UAM fundamentals, regulatory frameworks, responsible innovation, safety, security, and UAM integration into transport plans.

Guided by seasoned partners OIGI, Dronint, FutureNeeds, and ISCTE, each module addressed pivotal components crucial for the standardization, integration, and progression of human resources in the European Union labor market.

With ISCTE leading in both scientific and professional adequacy, the consortium harmonized occupational profiles effectively, meeting educational and training needs and ensuring an accessible and user-friendly learning environment.

The roles played by partners were integral to the successful execution of the program, with each partner contributing specialized expertise, scientific knowledge, and professional experience.

Take a look at our online training program's modules:

1. What is UAM (Urban Air Mobility)-IAS (innovative Aerial Services)
2. Sustainable IAS operations in cities and regions
3. UAM/IAS safety
4. UAM/IAS security

Join our online training program!

We are thrilled to announce the launch of UAMSchool4Cities' online training program.

We extend a warm invitation for you to embark on this educational journey with us by joining here:

What's next?

After completing the comprehensive training, participants will be expected to possess professional competencies that will empower them to navigate the dynamic UAM market, make significant contributions to local and broader city environments, and excel in their workplaces through enhanced behavioral patterns and performance monitoring. The program's sustainability will be secured, with the platform and course available for five years post-project, and strategic efforts will be made to leverage Ljubljana's living lab infrastructure and the annual City as a Lab Summit for continual implementation. PR3's triumph underscores the unwavering dedication of all partners to advancing UAM expertise, fostering a skilled workforce, and ensuring a lasting impact extending beyond the project's conclusion. The attained results will be disseminated among partners, fostering collaboration, and paving the way for future UAM deployment initiatives.
